What is A Fractal?
A fractal is an object or quantity that displays self-similarity, in a somewhat technical sense, on all scales. The object need not exhibit exactly the same structure at all scales,

How Do Fractals Relate To Me

In the past 10-20 years, researchers in psychology have been finding increasing examples of fractal patterns across each of the domains of psychology: Including intentional behaviors, visual research and speech patterns. Interpersonal relationships are organized as fractal and most

recently that the self-concept is a fractal, with complexity being associated with health in both the psychological and social domains. Fractal complexity is constantly exchanged between biological, psychological and social processes.

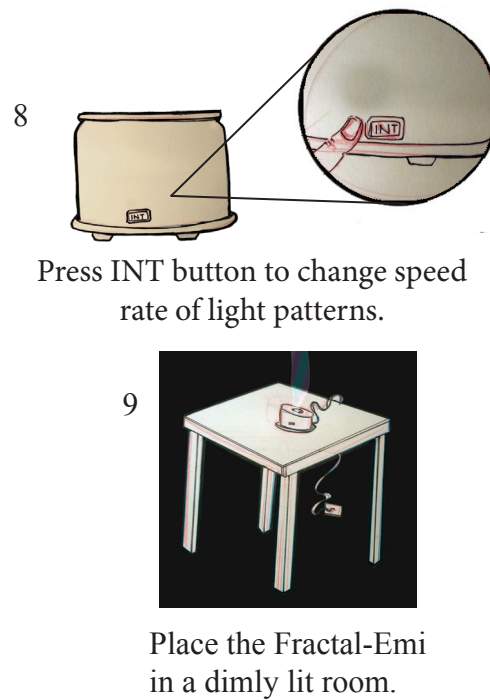

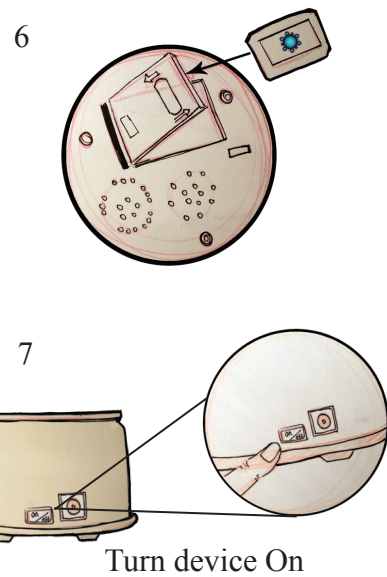

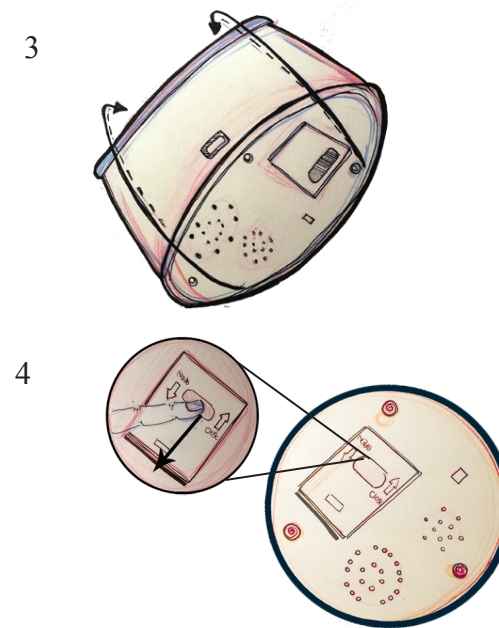

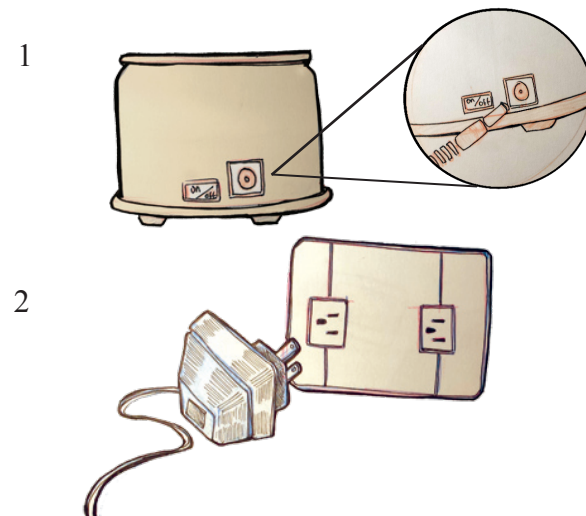

Fractal personality structure help us grow and connect, as do fractal relationships, and each likely has direct influences on physical health by encouraging integration and flexibility among circulatory, respiratory and immune systems.
